Where Companies Bleed Cash in Outbound Lead Gen

Sales teams need leads "*yesterday*". But the traditional manual approach creates hidden financial leaks across the entire pipeline.

1 2-3 Days of Lost Sales Velocity

High-salary B2B sales reps sit idle or spend hours manually cleaning spreadsheets instead of closing deals. Deals close slower and pipeline momentum dies.

2 Calling Paying Clients by Mistake

Without automated CRM suppression, reps accidentally cold-call current customers or active pipeline leads. A major reputational disaster for the brand.

3 Burning $300–$800 on Scraper APIs

Running scraping tools (PhantomBuster / Apollo / Vayne) blindly on 2,000 raw contacts burns hundreds of dollars on people who will be disqualified immediately.

4 Demoralized Reps & 90% Junk

Search keywords like "Construction" return site foremen, plumbers, and junior interns. Reps waste their dial time on non-buyers and burn out.

How the 7 Filters Squeeze 2,000 Leads to 50

~2,000	**Raw Industry Scrape** Broad keyword searches contain 90%+ non-buyers, trade workers, and subordinates.
~900	**CRM Suppression (KulOff / Anti-Overlap)** Excluded 1,100: Checked against active clients and ongoing sales deals to eliminate duplicate calls.
~350	**Negative Title & Seniority Filter (Regex)** Excluded 550: Purged site foremen, electricians, plumbers, lawyers, and junior roles.
~120	**Official Business Registry (SNI Industry Codes)** Excluded 230: Purged equipment suppliers, retailers, and non-property developer entities.
~70	**Seniority & Age Check (Public Records)** Excluded 50: Flagged retired profiles (66+) and out-of-region contacts before paying for APIs.
~58	**AI ICP Auditor (Strategic Authority)** Excluded 12: Verified true budget & project decision-making power vs. vanity titles.
53	**Targeted API Enrichment + Quality Gate** Scraper APIs run ONLY on top 53 vetted leads. 100% verified C-suite ready for sales.

The 7 Filters Explained in Plain English

1. CRM Suppression (KulOff)

Cross-checks 150k+ CRM records in 1 second. Blocks existing clients and open deals so sales never embarrassingly cold-calls active accounts.

2. Title & Negative Keywords

Runs in 50 ms. Instantly strips site foremen, electricians, technicians, junior assistants, and unrelated consultants.

3. Official Business Registry

Verifies national registry data (SNI / NACE codes). Ensures the company is a real property developer, not a parts supplier or bankrupt entity.

4. Seniority & Age Verification

Checks public population records to detect retired executives (66+) before spending a single dollar on scraping credits.

5. AI Decision-Maker Auditor

AI assesses whether the candidate holds actual budget authority and decides *WHERE* and *WHAT* to build, based on our ICP.

6. Targeted API Enrichment

Triggers paid scrapers (PhantomBuster / Vayne) ONLY on the final short-list of 50 leads, cutting API costs by 95%.

7. CRM-Ready Master Export

Automated sanity checks on experience and network size. Exports clean, uncorrupted data directly into CRM.

100% Sales Ready

Real Numbers, Real Business Impact

95%

API Cost Reduction

Spent only 774 credits instead of 30,000+ by running paid scrapers strictly on the final short-list.

2 min

Execution Speed

Replaced 2 full working days of manual, error-prone spreadsheet cleaning with an automated script.

100%

Reputational Safety

Zero risk of cold-calling existing clients or overlapping active sales pipeline opportunities.

Pure LPR

Higher Sales Morale

Sales reps connect directly with Real Estate CEOs, Development Directors, and City Planners.
